Installation Guide

| Soul Wall Lamp

This lamp consists of 3 parts:

> Face / Medium drop / Large drop.

The only part that contains light and support is the face;

Both the medium drop and the large drop just need a screw to be fixed on the Wall;

First Step:

The support to Face, is fixed with two screws where the wire passes;

Then the wall wires must be connected to the LED lamp (suitable for 240V) which is inside a box to hide the wires.

To close the wire connection box, just tighten the appropriate screws at the top and bottom.

We send an appropriate wrench to facilitate the tightening of the screw at the top and bottom;

After the support is firmly attached, the lamp can be placed.

Then fit the face on the support hook;

We left some margin to adjust the face.

Both the medium drop and the large drop (base) just need a screw in the wall.

Recommended height distances

Height for drilling according to the
support in each part

2000 mm

1830 mm

1200 mm

1120 mm

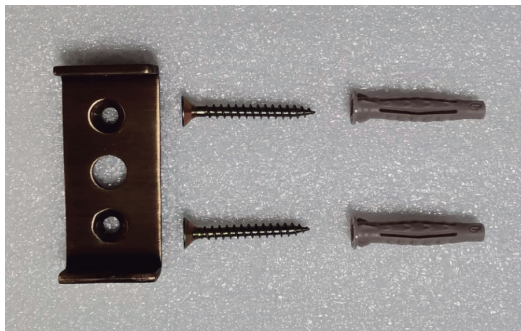

400 mm

320 mm

Installation Face

1

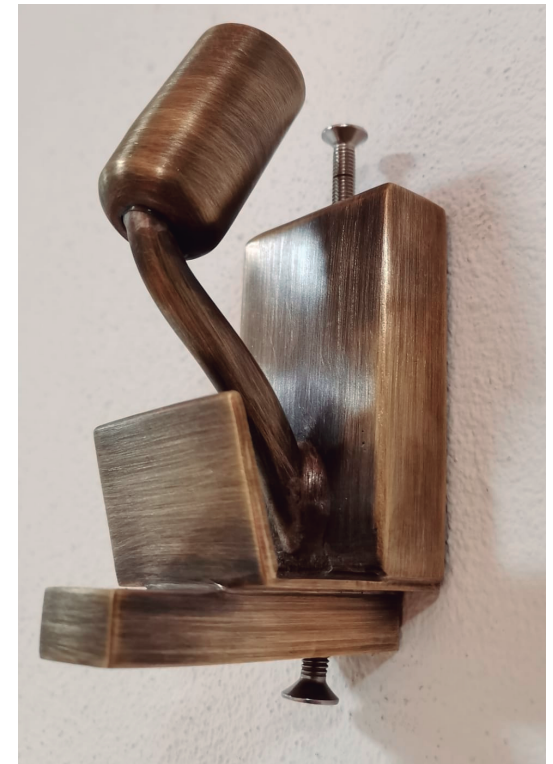

Fix this support on the wall by passing the wall wire through the center

2

Connect the wires to the lamp

3

Place the wires inside the box and tighten up and down with the tool that we sent

4

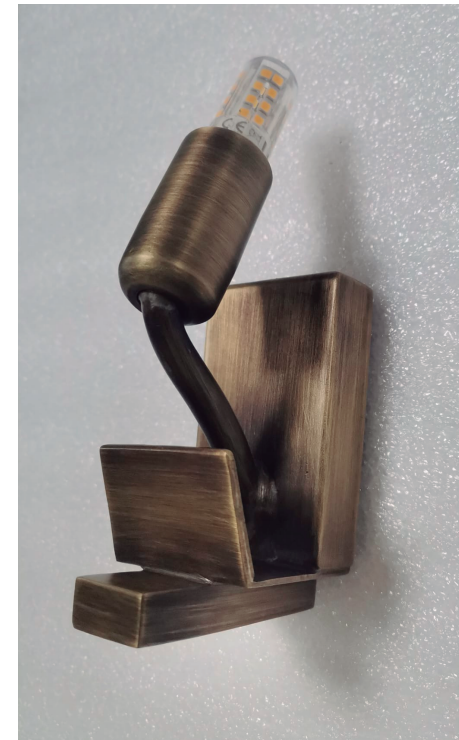

With the appropriate screws and the key we sent, tighten the screw without the lamp.

5

The bottom screw needs to go inside

6

Put the lamp

7

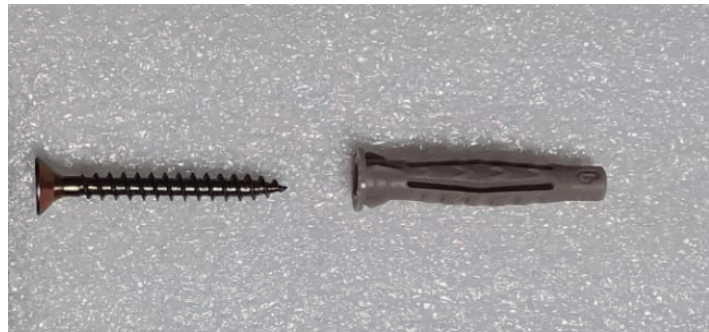

Fit the face on the support hook;
